Subject: Outstanding Collaboration – Whittaker Site, North Brunswick, New Jersey

Dow Environmental Remediation and Restoration team would like to recognize ISOTEC Parsons, and EPI for the safe and successful project execution at the Wittaker site. Over a 7-week period, this team performed an insitu chemical oxididation project where over 28,000 lbs of sodium persulfate solution and approximately 10,000 gallons of sodium hydroxide were injected into a total of 38 points, 18 of which were inside an active building. This could not have been performed as effectively, efficiently, and safely unless everyone was working as a cohesive team. This type of collaboration doesn't just occur. It takes great effort and a strong safety culture, worthy of recognition.

Because of the great success of this team, Dow would like to present each one of you with our "We Have Evolved" coins.

Sincerely,

Kip Cosan
